

### Downlink RxQual Probability

According to EIRENE requirements, both downlink and uplink RxQual measured outdoors on a  $\lambda/4$  dipole antenna at 4 m height must be within the range of 0–3 with at least 95% probability in space and time, evaluated over 1000 m section blocks. Antenna line correction factors are not applied in this evaluation. RxQual values of 6 or 7 occurring immediately after handovers—caused by temporary BER mis-evaluation—are excluded from analysis.
